

RESUME

Jason Ellison
406 S. School St.
Fairhope, AL 36532
+1 251 202 4519
<http://www.jasonellison.net/>

POSITION SOUGHT: Network Engineer / System Administrator

SKILLS:

Systems:

Linux 2.2 - 2.6, AIX 4.x, Windows 3.x-2003, Novell 3.x-4.x,
*BSD, Nagios, RANCID

Services:

DHCP, DNS, HTTP, IMAP, IPSec, MySQL, NIS, NFS, POP3,
RADIUS, SMB, SMTP, SSH

Network Systems:

Cisco IOS, Cisco PIX/ASA, IPSEC, IP routing, ipchains/iptables,
OSPF, RIPv1/2, QOS, VoIP, Advanced Switching/Routing, 802.11

Programming:

Bash, C, Expect, Ksh, Perl, PHP, Python, SQL

EXPERIENCE:

01/2017
to
Present

Shiptracks

New Orleans, LA

Maintain servers and software for all systems related the collection and storage of global AIS data. Deconstruct both systems and processes to implement effective monitoring and proactive management strategies. Support the programmers and maintain the infrastructure (git, email, web servers, MQTT servers, etc...)

02/2014
to
12/2015

JMF Solutions, Inc.

Fairhope, AL

CTO Utilize automated tools such as Puppet, Ansible, and Expect to manage and maintain a large VoIP install base. Manage and maintain a large email infrastructure. Manage and maintain cPanel and Plesk hosting environments. Industrial wireless and Ethernet design and debug for Kuka, Boeing, General Motors, etc. Focus on SIEMENS gear and Profinet, ISO/TCP. Maintaining low latency and safe transport for industrial PLC protocols and safety traffic.

03/2012
to
02/2014

Rochen

Dundee, Scotland, UK

Work with a virtual team (they are humans) to maintain a large number of Linux hosting servers which are also geographically distributed. Maintain Cisco based network and Cisco Unity Express phone system. Manage VPN devices to enable secure connections for both phones and users. Implement and maintain high performance load balancer setup. Focus on networking, security, virtual environments and automated Linux administration.

02/2008
to
02/2012

Riviera Utilities

Foley, AL

Network and Systems Administrator. Designed and maintained network HP switches, Cisco routers and Cisco firewalls. Maintain all servers Windows 2000-2008, Linux. RANCID for network change management. Squid Proxy, Samba 3.x, Apache with Kerberos AD Integration for various web services Wordpress, NAGIOS and WebCVS. Implement KACE Dell appliance. Design/Install/Maintain Vmware ESX 4.x with Dell EqualLogic SAN.

EXPERIENCE:

- 02/2008
to
07/2009
- JMF Solutions, Inc.
Fairhope, AL
Embedded Linux Consultant. Develop wireless operating system based on Ubiquiti's AirOS for an industrial network equipment manufacturer. Protocol design and Linux kernel module programming.
- 02/2008
to
08/2008
- BIS, Inc.
Robertsdale, AL
Network Engineer. Focusing on Larger clients with special needs. Lefthand iSANS, Microsoft Virtual Server, Cisco PIX/ASA/IOS, ActiveDirectory, Windows 2003 Server Administration, Exchange Administration, Squid Cache Design and Installation, Nagios monitoring including writing custom plugins, Apache, MySQL, and MoinMoin wiki maintenance.
- 02/2006
to
02/2008
- JMF Solutions, Inc.
Fairhope, AL
Wireless Network Engineer. Design wireless networks using 802.11a/b/g COTS radio equipment. Networks are installed on cellular towers with 5mi range. Wireless routers are Linux based routers running IkarusOS by Antcor. Worked with Antcor to fix software bugs found while testing their product IkarusOS. Developed wired audio transport system for AM/FM radio systems using FreeBSD, Darkice, Icecast, livecaster and VLC. Currently in use by 88.5 FM, WBHY 840 AM and WLPR 960 AM.
- 01/2004
to
02/2008
- B.I.S.
Robertsdale, AL
Consultant on jobs Cisco, Unix and network security related. Design and configure medium sized networks using Cisco and Linux as components. Design and configure IPSec Networks using Cisco routers, Cisco Pix firewalls, Sonicwall, and FreeSWAN(Linux). Created Linux based samba servers to replace Windows/Novell servers. Utilized Hylafax and Linux to automate a bill processing business, cutting labor requirements in half.
- 01/2001
to
07/2005
- Delphi Mechatronic Systems
Foley, AL
Network and Systems Analyst. Install, configure, maintain and monitor Cisco based network, including Cisco catalyst switches, Cisco routers and VPN concentrators. Configure and support multiple AIX 4.x RS/6000 servers. Configure, maintain dhcp, bind, apache, mysql, sendmail servers on AIX and Linux. Install, configure and maintain Citrix Metaframe server. Install and maintain multiple Windows NT 4.0 through Windows 2000 file Servers. Install, configure and maintain Novell 4.11 servers. Deploy and support of 100+ win2000 workstations. Configure and monitor Oracle 8.x servers. Used Netsaint, MRTG and several custom programs to automate system and network maintenance. Wrote several custom utilities in bash, C, expect, perl, php and python. Unix, Windows and Cisco security.
- 03/1997
to
01/2001
- The Computer Outlet, L.L.C.
Foley, AL
Part Owner 10%. Lead Technician. Build and upgrade PC's, Install, configure, troubleshoot networks LAN and WAN. Experience with Win9x/NT, SCO, Linux, Novell 3.x-4.x, Winframe and Metaframe, IPSEC, TCP/IP. Designed and Installed City of Foley Network / Servers (City, Police, Library). Designed Linux IPSec routers. Familiar with Ethernet and fiber structured cabling.

In addition to the jobs listed above, I have done consulting in the fields of Linux, QoS, network design and network security.

03/1997	A+ Certified Service Technician (#A36DTT1281)
07/1996	HP LaserJet Basic Hardware Training (CZ#SA6334) Certified on many HP laser/inkjet printers and computers.
06/1996	Southeast College of Technology, Mobile, AL Associate Degree: Electronics Engineering Technology
1993	G.E.D. High School Diploma

RECOMMENDATIONS:

"I would recommend Jason to fill any technical role that requires understanding and a deep evaluation of any networking issues. Jason will relentlessly analyze an issue through the most tedious datasets without losing his innate desire to understand what is behind the behavior. There is no desire for a quick workaround with Jason on the job. He will continue to work a problem until it is understood and eliminated."

Kevin Welch
Teacher at the Iglesia Casa Vida Nosara

"Jason has demonstrated both a high level of technical knowledge, and a rare level of dedication. He's provided excellent customer service and been quick to volunteer when we needed him."

Michael Towler
Server Administrator/Tool Designer Level 2 at Boeing

"Thank you very much for your flexibility and hard work this week to help us resolve a number of network issues above and beyond your KuKa scope of work. The challenges with coordination of schedules, production windows and network issues here at Boeing are tough, which you worked with and through. Your creativity and talents proved to be key in resolving a number of issues and are greatly appreciated by our equipment engineering team on this high profile advanced automation project. Our networked machine data collection is key in our efforts to measure our efficiency and performance. We can only move forward to measure equipment operation, if we know our progress to

RECOMMENDATIONS:

date. Due to your tireless efforts and creativity, we are now collecting data from the functional automation network. We have a long way to go, with network clean up issues, yet today we are on line and monitoring our machine performance, thanks to your detailed and creative efforts. Thank You for your hard work valuable work ethic."

David Riffle

Equipment Engineer - 777 automated MBFB and FAUB

"I reached out to Jason when I needed help implementing a network management tool called Nagios. Specifically, I needed help getting data from an Iomega network attached storage unit to a Nagios plug-in. This required in depth knowledge of both Nagios and the SNMP protocol. Jason was very knowledgeable and very helpful. He went the extra mile to make sure that I got the plug-in working correctly. I'd highly recommend him to anyone."

David Lynum

Executive IT Support Lead at Platform Specialty Products Corporation

"Jason made outstanding contributions to an embedded Linux project we worked on together. He is a diligent and skilled engineer who takes initiative to confront challenging problems. I would not hesitate to include him on any team requiring expert level talent."

Bruce Leidl

Founder

netifera

<http://netifera.com/>

"We were in the process of implementing Nagios monitoring solution for our group and came upon the plugin for OpenManage written by Jason Ellison which is also Open Source. We had issues with making it to work because we used Nagios Appliance not software based Nagios with heterogeneous Windows and Redhat clients. Jason Ellison was kind enough to help us understand our requirement delve into its details and advise us the best possible solution to make it to work."

I highly recommend Jason for his knowledge, quick response, collaborative approach and prompt and correct advice; I'm sure will work with him again."

Mohammed Cyclegar (NIH/NLM/LHC)

Senior Systems Administrator

National Library of Medicine

Cognitive Science Branch

Bethesda, MD

<http://lhncbc.nlm.nih.gov/cgsb/>

"Jason is a sharp mind with a decent background in wireless systems and networking in general. His knowledge in Unix systems is a great advantage for him and his ability in exploring workarounds for problems make him a valuable part for every team."

George Sifnios

Project Manager and Co-Owner

Antcor

<http://web.antcor.com/>

RECOMMENDATIONS:

"This letter is my personal recommendation for Jason Ellison. I worked with Jason for over 5 years and during that time we have collaborated together on a number of projects. Jason's knowledge and understanding with networking infra-structure, both in Windows and open systems (Linux) environments, is rivaled by few. His experience with Data Center Operations includes Automated Processing and Control, Network Design and Maintenance, and Second and Third Level Problem Diagnosis and Resolution. During my association with Jason, I have seen him function and excel in a wide range of business IT environments. These include working with small- and medium-sized companies where providing functional IT support means doing anything and everything (i.e. "a one-man shop"), to working as a key member of a Fortune 20 Enterprise where a more structured and collaborative approach is the norm as thousands of IT professionals work together to achieve a common goal. In all of these environments, Jason has proved himself to be innovative and productive, approachable and easy to work with. It is my pleasure to recommend Jason for inclusion on any IT related project, most especially in the areas of infra-structure and networking. Please feel free to contact me for further information"

Steve Johnson
IT Infra-Structure Manager / Project Manager
Delphi Connection Systems
Irvine, CA
<http://delphi.com/>

"I have worked with Jason for over 5+ years. He is a top notch IT professional who enjoys his work and is willing to do what it takes to complete a project. I highly recommend Jason. He thrives in challenging environments."

Lee Kibler
Engineer
Riviera Utilities
Foley, AL
<http://www.rivierautilities.com/>

"Jason Ellison has provided assistance with out network gear (Cisco Pix 5510 and 2800 series Router HP Procurve Switches). I can not overstate the ease at which Jason was able to accomplish the tasks we provided him. I would recommend Jason for any network analysis, routing, and switch configuration jobs available. However this is only one sliver of his knowledge. He is very adept with Radio Wave Transmissions, Linux and it's many flavors as well as network monitoring software."

Robert Clemmons
Network Administrator
Columbia Southern University
Orange Beach, AL
